

Evacuation from “TSUNAMI”

【Go to a High Place】

Do not be too concerned about going to a predetermined safety area. The top priority is to evacuate to **high ground immediately !!**

◎KEY POINT : for protection from Tsunami.

Fast action!

When you feel an earthquake, get away from the coastline, to higher ground immediately! Do not wait! Please evacuate the area first, and then you can confirm the situation.

Caution !

Tsunami waves are expected to hit repeatedly. Later arriving Tsunami waves will be much higher. Please stay in the safe area until Tsunami cautions are cleared.

Evacuate on Foot!

Where possible, you should evacuate danger zones on foot, because too many vehicles will cause congestion for the Emergency Services. You should talk to neighbors about evacuation procedures and the location of safe areas.

Height	Category	Expected damage and Action to be taken
5m ~ over 10m	Major Tsunami Warning	Wooden structures are expected to be completely destroyed. Evacuate from coastal or river areas immediately to safer places such as high ground or a Tsunami evacuation building.
1m ~ 3m	Tsunami Warning	Buildings will be flooded and anybody exposed will be caught in Tsunami currents. Evacuate from coastal or river areas immediately.
0.2m ~1m	Tsunami Advisory	Anybody exposed will be caught in strong Tsunami currents in the sea. Small vessels may capsize and fish farming facilities will be washed away. Get out of the water and leave coastal areas immediately.

※ Tsunami warning category: According to Japan Meteorological Agency.
